PROJECTS

CONTACTLESS FARE PAYMENT FOR MODERN JEEPNEYS
Front-End Programmer
January 2020 – February 2021
A Capstone project which involves Arduino and Web Development. The project has two outputs – a device and a website. The device is solely made for payment transactions whenever a passenger enters the PUJ. On the other hand, the website allows a user access to monitor their transactions, transfer money and many more

E-COMMERCE WEBSITE FOR ALEX STEEL SUPPLY
Front-End Programmer
January 2019 – May 2019
A System Analysis and Design (SAD) project which solves the problem in marketing, increasing sales, and monitoring stocks as well as deliveries from a manual system of Alex Steel Supply to a brand new digital system. The project gains good feedback from the client as well as from the panel of judges.

E-LEARNING MANAGEMENT SYSTEM
Front-End Programmer
January 2019 – May 2019
An Advanced Database Management Systems (ADBMS) project focuses on how we were good at database management by implementing advanced database methods to a newly designed website. It caters to management for users, lessons, quizzes, scores, as well as messaging.

SEMINARS AND TRAINING

MICROCONTROLLER PROGRAMMING: INTRO TO ARDUINO SYSTEM
Social Hall, Bulacan State University
December 11, 2019

AUGMENTED REALITY
Social Hall, Bulacan State University
October 24, 2019

MOBILE PROGRAMMING: IN FOCUS
Social Hall, Bulacan State University
September 20, 2019
